Indications for using nasal implants include altering or reconstructing the shape of the patient's nose.

For such cases, Implantech offers a number of nasal implants made of **silicone**, **ePTFE-encased silicone** or **solid ePTFE**.

Each material has its own advantages, such as supple, flexible silicone from which the

CONFORM™ FACIAL IMPLANTS

Super flexible
Effective

It's all about the grid

Super Flexible Conform™ Implants

The main objective of facial augmentation - adding volume in a desired shape - is to provide a more aesthetic, balanced and youthful appearance.

Our Conform™ silicone facial implants are designed to achieve just that. They're an effective, long-lasting choice for augmenting such areas as a receding chin, flat cheeks, weak jawline, tissue loss in an aging face or a traumatic injury site.

Conform's grid-like backing means more flexibility for adapting to underlying bone and tissue. This permits a more natural look and fit with no palpable edges.

Conform Binder Submalar®

Ideal for replacing volume lost beneath the cheekbone in the aging face

Conform™ Extended Anatomical Chin

Adds projection to create a stronger chin and greater facial harmony

Conform™ Midfacial

Augments both malar and submalar regions for a fuller, more aesthetic appearance

Conform Terino Malar Shell®

Augments the volume-deficient cheek area for a more balanced face

majority of our implants are made.

NASAL STYLES OF SILICONE

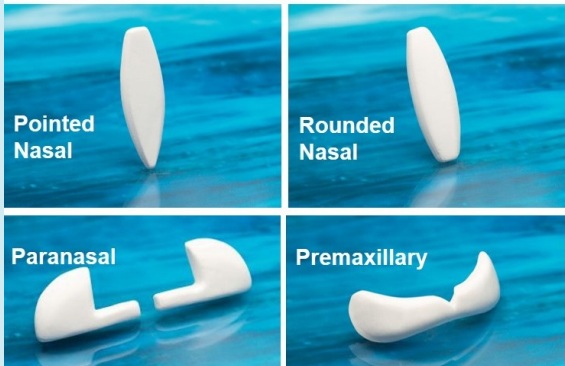

Composite™ implants feature silicone encased in ePTFE, a biomaterial that permits tissue in-growth.

COMPOSITE™ NASAL STYLES

And solid ePTFE implants are supple and enable tissue in-growth that can help implant fixation.

NASAL STYLES OF SOLID ePTFE
