MORE SUPERIOR PRODUCTS

From Implantech

More tools for your practice

In addition to high-quality facial and body-contouring implants, we offer a variety of other superior products.

For example, our **SE-100 Smoke Aspiration Tip** protects your team by removing hazardous airborne contaminants and

CHIN IMPLANTS

from Implantech

*For improved facelifts
and facial balance*

Chin implants can provide facial balance and improve facelifts

According to the **AAFPRS**, not only does the chin have “remarkable influence” on the look of the face and neck, but improving its shape “can have positive effects on other areas that you might not anticipate.”

One such area of a well-defined chin—achievable with silicone chin implants—is the balance it gives to other facial features like the nose.

See what Dr. L. Mike Nayak says about the efficacy of silicone chin implants on [Instagram \(@nayakplasticsurgery\)](#) or [YouTube](#).

Another area is that of facelifts, performed by many surgeons in conjunction with chin augmentation.

In their NIH article involving alloplastic chin implants, **Harris & Raggio (2021)** state, “Chin augmentation can significantly improve the results of a facelift by lengthening the jawline and providing a better framework in which to reposition the soft tissues of the face.”

The bottom line? For greater facial

body fluids from electrocautery procedures. It's universally adaptable to all electrocautery pencils and can be cut to length.

Hand-crafted from surgical-grade steel, these **Periosteal Elevators** more easily create an optimal pocket for our

facial implants. Their shape efficiently elevates the periosteum while their ergonomic design helps reduce hand fatigue during longer procedures.

Implantech is an excellent source for your silicone **sheeting** and **tubing** needs. Choose sheeting either reinforced or non-reinforced, and long-term or short-term implantable.

For silicone tubing, we offer both implant grade (30+ days) and healthcare grade (less than 30 days).

Made of medical-grade silicone, **Cimeosil®** products flatten and fade scars. While useful for all

scars, Cimeosil is especially effective on raised and red scars (hypertrophic scars and keloids) resulting from trauma or surgery. Choose from **tubed gel** or **gel sheeting**.

With stretchable, fabric-covered silicone gel, **Gelzone® Wraps** uniquely combine compression,

musculoskeletal support and scar management. Just overlap and secure with a simple closure

balance and improved facelifts, choose from our wide array of chin implants made of silicone, ePTFE-covered silicone (Composite™) or solid ePTFE.
