### FANCY MEETING YOU

Meetings where we hope to see you!

**DON'T WAIT  
SPACES ARE  
FILLING UP FAST!**

**Advanced Techniques  
Using Facial & Body-Contouring Implants**

**Our ever-popular cadaver  
workshop is back!**

Are you ready to give your patients a great option for pleasing, long-lasting outcomes?

Let 2023 be the year you finally say "Yes!" to our *Masters Educational Series* workshop.

## SPOTLIGHT ON

### Flowers Mandibular Glove®

For chin projection  
with a slight upward tilt

#### The Flowers Mandibular Glove®

The drawbacks of a weak chin are pretty well known—the nose looks too big, lips seem out of proportion, the face appears pushed in or too short.

A variety of silicone chin implants can provide the needed anterior projection. However, new challenges arise when an upward chin tilt is also desired and lateral augmentation isn't.

**The Solution** – Implantech's *Flowers Mandibular Glove® (FMG) implant*.

The *FMG* implant augments the chin while slightly tilting the chin mound upward. Its posterior surface matches the variations of the mandible's anterior surface for no appreciable lateral augmentation.

The result is a fuller, more defined chin, giving the entire face a more balanced and pleasing appearance.

#### The Placement

An expert faculty takes you through the latest techniques using facial and body-contouring implants of solid silicone.

You'll get classroom instruction along with hands-on sessions and observation in the cadaver lab.

The result? A brand new dimension to enhance your practice.

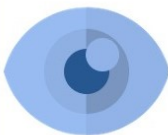

## FACIAL

DAY 1 HANDS-ON  
CADAVER LAB

### Implants covered

Chin • Jaw Angle • Malar • Submalar  
Paranasal • Nasal • Temporal Shell

## BODY

DAY 2 OBSERVE  
CADAVER LAB

### Implants covered

Gluteal • Pectoral • Calf

Also discussed on both days:

- Patient-specific implants
- Challenging cases
- Managing complications

Upon course conclusion, you'll receive a Certificate of Completion, plus a "Course Certified" icon for prominent display on your website.

Sign up for one or both days in either July or November, but make take advantage of this opportunity happen this year!

According to Barry L. Eppley, MD, DMD, "The submental approach to chin implant placement is the most commonly used as it has high familiarity to many plastic surgeons. It provides the most direct access to the chin bone and has a very low risk of infection."

For an excellent surgical discussion and demonstration using the submental approach, check out Dr. William J. Binder's [surgical video](#).

Or, for a written how-to, download his [Surgical Technique](#).
